In the Community Post Hospital Stay:  
Follow-up with Patient within 48 hours of Transition Home  

Patients who have multiple conditions and complex needs may require care across different health care settings (e.g., hospitals, family physicians, etc.), which could potentially pose serious risks to their safety and quality of their care. Incomplete or inaccurate transfer of information, lack of comprehensive follow up care, and/or medication errors at the time of transition could be very dangerous and cause serious, preventable harm to patients. Furthermore, the impact of these risks may be intensified by patients and families who feel unprepared for self-management, and are unsure of how to access appropriate health care providers for follow-up.

Figure 1 is an outline of innovative practices and evidence-informed best practices that are designed to improve transitions between hospital and home.

The use of these practices varies significantly across the province. Teams are encouraged to prioritize the implementation of evidence-informed best practices before adoption of the innovative practices outlined in this document. When considering the adoption of innovations, recommended practices should be considered first, followed by promising practices, and then emerging practices.

Figure 1: Practices to Improve Transitions Between Hospital and Home

The material for Transitions Between Hospital and Home was developed in collaboration with Health Links and the Clinical Reference Group.
Description of this Innovative Practice

Upon leaving the hospital, individuals identified as having a higher risk of readmission (through screening or clinical judgement) should be followed up with a phone call within 48 hours of discharge. The follow-up phone call within 48 hours of discharge should be made by a community provider and/or hospital care provider who is known to the patient, using a scripted or standardized approach with a focus on the following goals:

- To monitor progress;
- To establish community networks for meeting patient needs;
- To enhance patient education and self-management training; and
- To provide follow up or reinforcement of the discharge plan/coordinated care plan.

Implementation of the Innovative Practice

Steps for Implementation | Tools and Resources | Considerations |
---|---|---|
This practice includes two key elements: 1. **Provider with existing relationship place follow-up call within 48 hours of discharge** The provider with an existing relationship (or who is the existing single point of contact) makes the follow-up phone call within 48 hours of discharge. 2. **Use a standard approach or script** A standard approach or script should be used and would include the reinforcement of the discharge plan (and/or updated coordinated care plan) a review of the patient’s health status, medications, appointments, community services and review what to do if problems arise. | | |
- Prior to creating a standard work process for conducting a follow-up phone call, ensure the single point of contact has been identified. See [Coordinated Care Management Innovative Practices](http://www.hqontario.ca/Quality-Improvement/Our-Programs/Health-Links/Coordinated-Care-Management/Invite-and-Engage-Patient) | | • Consider patients’ preferred method of communication (e.g., phone call, email, text). • Future exploration may be needed to determine if outcomes are impacted by the relationship between the caller and the patient (e.g., do outcomes differ if the caller is a physician, a provider in the patients’ circle of care, or an automated message?) • If other services are planned to be in place (e.g., Community Care Access Centre) for follow-up post discharge within 48 hours, a follow-up phone call may create unnecessary duplication of services. | |
Example scripts for the follow-up phone call: | | |
- **Project RED (Re-Engineered Discharge)** is a research group from Boston University Medical Centre that develops and tests strategies to improve the hospital discharge process. Component 12 of their process focuses providing telephone

### Measurement

**Quality Improvement Measures** are used to help with monitoring progress in implementation of a change and determining whether that change is leading to improvement. Just as a health care provider may monitor heart rate or blood pressure to determine a patient’s response to treatment, collecting information relating to processes for the improved provision of care allows the team to know whether they are consistently moving towards a high reliability care environment. *For more information on Quality Improvement and Measurement please visit [http://qualitycompass.hqonto.ca/portal/getting-started](http://qualitycompass.hqonto.ca/portal/getting-started).*

The following measures have been developed to help to determine: 1) if Innovative Practices for Transitions Between Hospital and Home are being implemented; and 2) the impact of these practices on Health Links processes and the outcomes of care at the patient, population, or systems level.

Health Links, organizations, and/or providers that elect to implement one or more of the Innovative Practices for Transitions Between Hospital and Home are strongly encouraged to collect data on the associated measures and report them to Health Quality Ontario. This will enhance analysis at the next review (Sept 2017), which will benefit all of the Health Links.

### Suggested Measurements

(*please see Appendix A for additional details*)

<table>

<tbody>
<tr>
<td>Numerator: Number of patients with multiple conditions and complex needs who were recently discharged from hospital within seven (7) days and had an unplanned visit to the emergency department</td>
<td></td>
</tr>
<tr>
<td>Denominator: Number of patients with multiple conditions and complex needs who were recently discharged from hospital within seven (7) days</td>
<td></td>
</tr>
</tbody>
</table>

Exclusion Criteria: Patients with multiple conditions and complex needs who visit the ED within seven (7) days of discharge for reasons unrelated to original admission to hospital. Patients who meet the criteria but who are not offered access to the Health Link because they have moved beyond Health Link catchment area, have died, transferred to a different facility or signed out

### Reporting Period

Recommend that Health Links collect and report data for a minimum of three (3) months. QI RAP templates will be available if the Health Link chooses to use them.

### Data Source

Manual data collection by participating primary care, hospital and community care providers within the Health Link.

### Comments

Selected outcome measures will help to evaluate the impact of the efforts to introduce innovative practices into transitions between hospital and home.

The material for Transitions Between Hospital and Home was developed in collaboration with Health Links and the Clinical Reference Group.

#### Additional Specifications

**Calculation Method:** Average or median time per week

**Time:** The number of hours (rounded to the nearest half hour) between the time of discharge and the time of follow-up (phone call)

**Average:** The total time recorded during the week/The total frequency that the time was recorded during the week

**Median:** In a sorted list of the times per week, the median is the middle number

**Exclusion Criteria:** Patients who meet the criteria but who are not offered access to the Health Link because they have moved beyond Health Link catchment area, have died, transferred to a different facility or signed out

#### Reporting Period

Recommend that Health Links collect and report data for a minimum of three (3) months. QI RAP templates will be available if the Health Link chooses to use them.

#### Data Source

Manual data collection by participating primary care, hospital and community care providers within the Health Link.

#### Comments

The selected process measures are designed to help Health Links draw on the fields of Improvement Science and Implementation Science as these practices are implemented. Process Measures are used to assess:

1. Progress in implementation components such as reach (how often the practice is being used);
2. Adherence (fidelity) to the specifications of the steps that must be in place for a program or practice to operate; and
3. Sustainability of the process as designed so that it will continue once the initial attention has waned.
### Stage of Hospital Stay
In the community post hospital stay

### Innovative Practice
Follow-up with patient within 48 hours of transition home

### Type of Measure
Process Measure

### Definition/Description
Upon leaving the hospital, individuals identified as having a higher risk of readmission (through screening or clinical judgement) should be followed up with a phone call within 48 hours of discharge. The follow-up phone call should be made by a community provider and/or hospital care provider who is known to the patient, using a scripted or standardized approach with the focus on the following goals:

- To monitor progress;
- To establish community networks for meeting patient needs;
- To enhance patient education and self-management training; and
- To provide follow up or reinforcement of the discharge plan/coordinated care plan.

**Dimensions:** Effective, Patient Centered, Safe, Timely

**Direction of Improvement:** ↓

**Calculation Method:** Numerator/Denominator*100

**Numerator:** Number of patients with multiple conditions and complex needs who identify one or more new issue(s) during the follow-up phone call

**Denominator:** Total number of patients with multiple conditions and complex needs that receive a follow-up phone call within 48 hours of discharge

**List of issues:** Issues log recorded and reviewed weekly for identification of themes and opportunities for improvement

### Reporting Period
Recommend that Health Links collect and report data for a minimum of three (3) months. QI RAP templates will be available if the Health Link chooses to use them.

### Data Source
Manual data collection by participating primary care, hospital and community care providers within the Health Link.

### Comments
