

# META: PHI Expands Access to Care for Patients with Substance Use Disorders

Mentoring, Education, and Clinical Tools for Addiction: Primary Care-Hospital Integration (META:PHI) is a model of care and support proven to reduce wait times to access addictions specialists, visits to the emergency department and stigma through Rapid Access Addiction Medicine (RAAM) Clinics.

# THE OPIOID CRISIS CONTINUES IN ONTARIO

Between 2016 and 2017, in Ontario there has been...

**45.9%** In opioid-(n=1265)

related deaths in Ontario

(n=7764)

**↑ 75.4%** In opioid-related emergency department visits 12.2% In opioid-related hospitalizations

## META: PHI MEANS PATIENTS DON'T FALL THROUGH THE CRACKS

Care integration is supported between RAAM clinics, emergency departments, withdrawal management services and primary care.

# CLINICS ARE SPREADING ACROSS THE PROVINCE

With the support of ARTIC, RAAM clinics were established in 7 communities in 2015.

The model demonstrated successful outcomes and was successfully spread further to:

clinics

Rapid Access Addiction Medicine (RAAM) Clinics are tailored to meet local needs and offer care that is:

### Evidence based

Provide patients with outpatient medication-assisted treatment and support, guided by evidence.

## Easy to access

Accessible to anyone via walk-in within 48 hours. No referrals, appointments, prescreening or additional fees are required to access care.

#### Patient centred

Reduce stigma through treatment plans that are co-developed by patient and provider. There is no time limit to the treatment period.

The spread of META:PHI in Ontario was supported through ARTIC, a partnership of Health Quality Ontario and the Council of <u>Academic Hospitals of Ontario</u> that accelerates the spread of proven health care across the province.

This project was funded by ARTIC from 2018–2019.
